This study aims to assess whether the internal control of sales through the marketplace in Alembana is in accordance with the principles of internal control components according to the Committee of Sponsoring Organization of the Treadway Commission (COSO). This research is important because it assists management in overseeing the implementation of internal controls on sales through marketplaces to prevent fraud during sales.

This study used a qualitative method. The data collection techniques were observation, interviews, and documentation. The data analysis technique was comparative analysis by comparing the internal control over sales through the marketplace with the internal component control principles according to COSO

The results of the study show that almost all of the internal control principles for sales based on the Alembana marketplace are in accordance with the COSO components. There is one internal control principle for sales through the marketplace in Alembana which is partly in line with the COSO principles of the internal control component. The principle that is partly in accordance with this is found in control activities where Alembana has not had clear and written procedures.
