This study aims to determine the influence of leadership, organizational culture, organizational commitment, and competence on performance both simultaneously and partially. The total sample is 137 people. The sampling technique used is Proportional Random Stratified Sampling. The data collection uses a questionnaire. For analyzing the data, it is used Multiple Linear Regression models with computer application program tools, namely SPSS version 22.0.

The results show that 1) leadership partially has no effect on performance, 2) organizational culture partially influences performance, 3) organizational commitment partially influences performance, 4) competency partially does not affect performance, and 5) leadership, culture organization, organizational commitment, and competence simultaneously influence performance.

Keywords: leadership, organizational culture, organizational commitment, competence, performance
