*This research was conducted to test the influence of product innovation, social media marketing, and brand awareness simultaneously or partially on purchase intention. Research data was collected by distributing questionnaires to 100 consumers of Beana Roastery coffee products. The data analysis method uses multiple linear regression analysis. Data analysis used the SPSS version 27 computer program. As a result of instrument testing, all question items were declared valid and reliable. The classic assumption test states that the research data is normally distributed, free from multicollinearity or heteroscedasticity. The research results provide empirical evidence that: 1) Product innovation, social media marketing, and brand awareness simultaneously have a significant influence on purchase intention. 2) Partially, product innovation, social media marketing, and brand awareness have a positive and significant influence on purchase intention.*

*Keywords: product innovation, social media marketing, brand awareness and purchase intention.*
